

AMAZOO Quebec, Canada

CHALLENGE

Zoo de Granby was a small municipal zoo looking to add activity in order to expand visitation and increase length of stay and in-park spending. ADG was contracted to design and build a five acre Amazoo Waterpark that would cater to its key market of children under the age of 10. This design build project also included an equipment supply of filtration systems.

SOLUTION

ADG designed a combination of key waterpark attractions to fit within the compact 5-acre footprint. Highlights include a 25,000 sqft wave pool, 1,050 ft Adventure Wave River and a 9,000 sqft activity pool for kids. ADG also provided Zoo de Granby with full waterpark construction drawings consisting of shells and mechanicals, wave equipment, filtration systems and additional necessary equipment.

RESULT

ADG met their challenge, providing a full day of activities in a waterpark that caters to families with young children for a full day of enjoyment. Amazoo exceeded expectations driving an influx in attendance rates and resulting in increased in-park spending. The success of Amazoo led to an expansion which nearly doubled the guest capacity for the waterpark.

“We love this water park! There are so many activities, that families with toddlers or teens will never get bored.”

– Customer, Zoo de Granby
