

SHEN AQUATIC CENTER

Clifton Park, NY

CHALLENGE

Shenendehowa School District, one of the largest in NY state, wanted to construct a new state-of-the-art aquatic facility to serve the educational and competitive swimming needs of the large suburban school district. ADG was chosen to provide and install a movable bulkhead as well as provide/install recirculation and filtration systems.

SOLUTION

ADG's prime responsibility was to supply the commercial pool equipment needed to make this aquatic center operate efficiently and effectively for the school. ADG's designs and manufactured equipment included: a Whitten® stainless steel moveable bulkhead for the 60'X119' pool, a Whitten® Uniflow II high competition perimeter recirculation system to provide wave quelling for a "fast" competition pool and a Whitten® pressure BiFlow filtration system, ensuring crystal clear water while reducing overall usage by 50%.

RESULT

Since completion, the facility has been a complete success providing both Shenendehowa students and its community with a first-class efficiently operated aquatic facility while, for the first time, providing a home pool for the Shenendehowa CSD swim teams.

"It's a gem of an aquatic center: the nicest in Upstate New York!"

-Pat Seligman, Former Coach
